Paper prototype

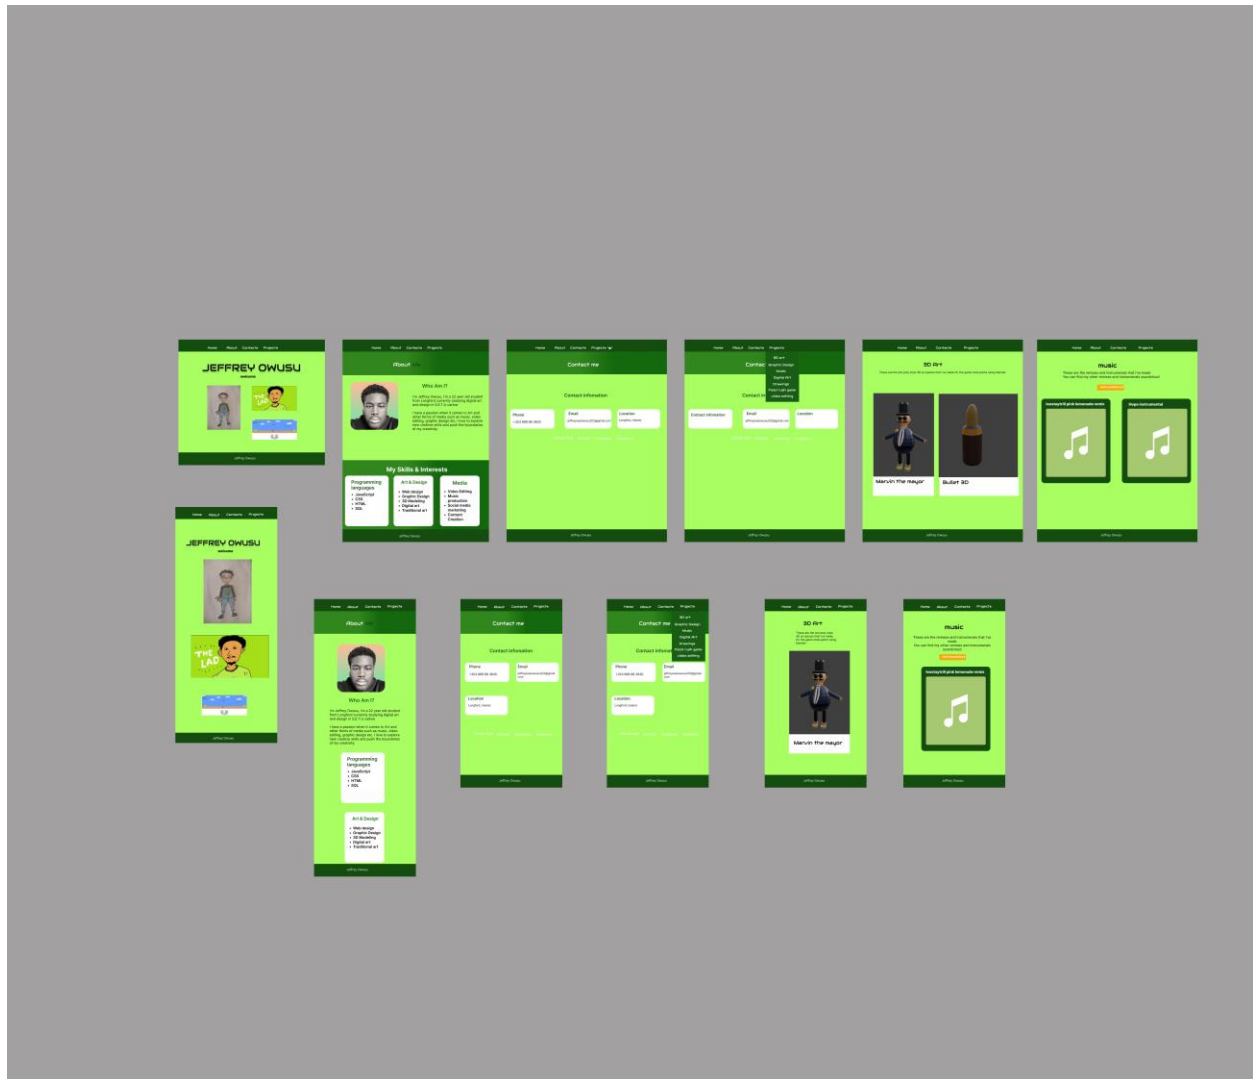

Medium fidelity

My first idea for the website was to create a menu button which shows the project content when clicked on desktop or when pressed on mobile phones.

And for the photo / video gallery pages I wanted to create a structure where it shows the large preview of the photo / video and on the right side it shows smaller previews of the photos and videos which you can scroll and select

High fidelity

I've made some design changes to the website, as you can see in the high-fidelity prototype. There's now a header with links to the Home, About, Contacts, and Projects pages. When you hover over 'Projects,' a dropdown menu appears, showing the project content. This feature also works on mobile devices.

Fonts

Audiowide

Designed by Astigmatic

Feeling — Futuristic

Appearance — Techno

Feeling — Stiff

Feeling — Excited

Whereas disregard and contempt for human
rights have resulted
